

WAPANOCCA HERON/EGRET ROOKERY  
May 10, 1996  
Glen Miller and Chester McGee

The rookery expanded greatly to the east this year with 149 of the nests (41%) found in new trees in that area.

Most of the aluminum tags are on the northerly side of trees containing or at one time containing nests. The group of numbers 1-57 start at the east end and head west. Numbers 58-100 and 100-140 start at the west end and generally head east. Numbers 141-206 are mainly on the east side.

No young were observed in nests. Unknown how many nests were active this year. Nests were found in 72 additional trees this year and 27 more nests were counted above last year. No attempt was made to search for tag numbers not found. Three Anhingas were seen coming out of tree #22.
